Professional Summary

Backend-focused Computer Science engineer with hands-on experience designing and deploying RESTful APIs, ML inference pipelines, and containerised applications using Python, FastAPI, Node.js. Built and shipped working software across two internships and three independently scoped projects spanning AI, blockchain, and IoT domains. Targeting entry-level Software Developer roles where backend engineering and scalable system architecture create real impact.

Technical Skills

Languages: Python, JavaScript, Java, C++

Frontend: React, HTML, CSS, JavaScript (ES6+)

Backend & APIs: FastAPI, Node.js, Express.js, ASP.NET MVC, RESTful API Design, JWT

Databases: SQL, PostgreSQL, MongoDB, Schema Design, Query Optimisation

DevOps & Cloud: Docker, Git, GitHub Actions, CI/CD Pipelines, Render, Vercel

AI / ML: EfficientNet, MobileNetV2, TensorFlow, Image Classification, Model Training & Evaluation

Engineering Practices: OOP, DSA, DBMS, Debugging, Postman, Swagger

Experience

AI Intern | Infosys Springboard

Dec 2025 – Mar 2026

- Trained an EfficientNet transfer learning model for plant disease classification across **10 crop categories**, improving accuracy from **80% to 92%** through iterative preprocessing and data augmentation
- Built and evaluated the full ML pipeline : data ingestion, augmentation, model training, and inference using TensorFlow and Python

Software Developer Intern | Eqsoft Business Solutions Pvt Ltd

Jun 2025 – Jul 2025

- Developed **12+** REST API endpoints using ASP.NET MVC to power client-facing business workflows, backed by a normalised MySQL database
- Secured API access with JWT-based authentication and implemented 3-tier Role-Based Access Control (RBAC); optimised MySQL queries via index tuning, cutting execution time by **35%**

Projects

Healthcare Management System | Java, Spring Boot, React, MySQL

Live Demo

- Built a full-stack hospital management application using **Java Spring Boot** and **React**, enabling patients to book appointments and track real-time queue status showing the current token being attended by the doctor.
- Designed and implemented **15+ RESTful API endpoints** for patient registration, appointment scheduling, live token queue management, and doctor dashboard — all backed by a normalized **MySQL schema across 6 tables**.
- Implemented role-based access for **3 user types** (Patient, Doctor, Admin)

Blockchain Product Verification System | Node.js, Express.js, MongoDB, React

Live Demo

- Engineered **10** backend API endpoints for product authentication & blockchain verification using Node.js and Express.js
- Integrated Web3.js for on-chain transaction calls on **Ethereum testnet (Sepolia)** and designed an indexed MongoDB schema to prevent fraudulent product registration

Smart Helmet Accident Alert System | PHP, MySQL, IoT

- Engineered a PHP backend to ingest real-time accelerometer and GPS data from helmet-mounted IoT sensors, triggering automated emergency contact notifications within **500ms** of collision detection
- Designed a normalised MySQL schema across **5 tables** to store sensor readings, user profiles, and alert event logs

Education

B.Tech in Computer Science and Engineering

College of Engineering Thalassery, Kerala

2022 - 2026

CGPA: 8.88 / 10

Certifications

Infosys AI Virtual Internship | IBM Full Stack Software Developer | UPCODE AI Bootcamp
